AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

- 1. (currently amended): A photosensitive <u>image-forming</u> material which comprises a photosensitive <u>image-forming</u> layer, said photosensitive <u>image-forming</u> material comprising a substrate and a reversibly decolorable colored layer disposed thereon, wherein said reversibly decolorable colored layer is reversibly colored and decolored, said reversibly decolorable colored layer is in a colored state at 25°C, and a temperature at which the color density of said reversibly decolorable colored layer is reduced to 50% based on that at 25°C is 50 to 120°C, wherein said reversibly decolorable colored layer can be the photosensitive image-forming layer.
- 2. (currently amended): The photosensitive <u>image-forming</u> material according to claim 1, wherein said reversibly decolorable colored layer comprises: an electron-donating, organic color-former; a compound having a phenolic hydroxyl group; and at least one compound selected from the group consisting of alcohols, esters, ketones and ethers.
- 3. (currently amended): The photosensitive <u>image-forming</u> material according to claim 1, wherein said photosensitive <u>image-forming</u> material is a silver halide photosensitive <u>image-forming</u> material for photographing comprising a photosensitive <u>image-forming</u> layer comprising a silver halide, a dye-providing compound and a binder.

2

AMENDMENT UNDER 37 C.F.R. § 1.116 U.S. Appln. No. 09/886,121

- 4. (currently amended): The photosensitive <u>image-forming</u> material according to claim 3, wherein said photosensitive <u>image-forming</u> material is a heat-developable photosensitive material comprising said photosensitive <u>image-forming</u> layer comprising an organic silver salt.
- 5. (currently amended): A method for forming an image comprising the steps of: exposing the photosensitive <u>image-forming</u> material recited in claim 3; developing the exposed photosensitive <u>image-forming</u> material to provide an image information thereon; and reading said image information by a scanner at said temperature of 50 to 120°C or higher to produce an image data..
- 6. (currently amended): A method for forming an image comprising the steps of: exposing the photosensitive <u>image-forming</u> material recited in claim 4; developing the exposed photosensitive <u>image-forming</u> material to provide an image information thereon; and reading said image information by a scanner at said temperature of 50 to 120°C or higher to produce an image data.
